There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it ge exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.	ts
Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left .Your is to find and return the integer value representing how many times the ant reaches back to original starting position.	task
is to find and return the integer value representing how many times the ant reaches back to original starting position. Note:	823C5E06
Assume 1-based indexing	
 Assume 1-based indexing Assume that the railing extends infinitely on the either sides 	*F00.8 *F10.8
Input Format:	, to
input1: An integer value N representing the number of moves made by the ant. input2: An integer array A consisting of the ant's moves towards either side	300
